

MAINTENANCE OF GRANWAX HARDWAX OIL

As with all hardwood floors, care should be taken to ensure good site conditions during installation and following handover to the customer. Failure to maintain a stable environment may result in wood movement and subsequent problems may occur.

INITIAL TREATMENT

In order to prevent damage to your wood floor from scratches, it is recommended that suitable entrance matting be fitted in all external doorways to prevent ingress of grit and fine dust. For commercial applications, **Granwax Ambassador Dirt Control Matting** is highly recommended. If furniture is to be placed onto the wood flooring, it is strongly suggested that all feet be fitted with soft felt pads to prevent damage when moving furniture. **Granwax Safeglide**s are recommended for this purpose.

REGULAR MAINTENANCE

Floors should be swept regularly using a clean, flat sweeper or brush to remove loose grit and dust.

Spillages or wet dirt should be removed immediately using a 1:150 solution of **EZee Hardwaxed Floor Maintainer** and a well wrung mop. Extreme care should be taken not to allow excess moisture onto the floor to prevent damage to the wood flooring.

It will be necessary, dependent on usage, to machine buff the floor to remove any fine scratches and enhance the visual appearance. Ideally, this operation should be carried out using a High Speed Rotary Buffing Machine and red or white floor maintenance pads, dependent on surface damage and level of sheen required.

PERIODIC MAINTENANCE

EZee Maintenance Oil can be used to 'refresh' the surface periodically as required. Please see the product data sheet for application information. (Please note: this product produces a Satin/Matt finish).

At some stage, dependent on usage, it will be necessary to re-apply further coats of **Granwax Hardwax Oil** in order to restore the cosmetic appearance and offer further protection to the surface. Please see the product data sheet for application information.
