

NATURE

Wood Floor Finish

DESCRIPTION: **NATURE** is the latest eco-friendly wood floor finish added to our range of high quality seals and finishes.

- **NATURE** is the look for wood floors that nature intended!
- Gives super flat matt appearance and adds the warmth, texture and colour enhancement normally associated with wax, oil and solvent based finishes
- **Nature** is a unique blend of linseed oil based resins and is made from 85% renewable resources.
- **Nature** contains zero VOC's and zero solvents and the innovative packaging is fully recyclable, in accordance with local authority guidelines.
- Easy to apply, 2 coat roller application

PREPARATION: Apply only to correctly sanded bare wood floors. Use a final grade of sandpaper/disc of 120-150grit. Ensure all traces of sanding dust are removed from the floor. **Nature** is a 2-coat roller applied system without the need for a primer coat. However, using a suitable primer may reduce any grain raising and may further enhance the natural wood colour. **Granwax Barrier Seal** is suggested for this purpose. Normal room conditions are 20°C and 65% relative humidity. A minimum floor temperature of 12°C must be observed during application.

APPLICATION: **1st Coat:** SHAKE THE BOX VERY WELL PRIOR TO USE. Using only a suitable roller, apply the first coat of **Nature** evenly, taking care to avoid puddles or accumulations of **Nature** on the floor. Maintain a wet edge to help prevent overlap marks. Apply **Nature** to an area of 3 – 4m² at a time. Once dry, (approx. 1 – 2 hours), if necessary lightly remove any raised grain using a fine grade 150-180 grit mesh disc/paper. Ensure all traces of dust are removed from the floor.

2nd Coat: Again, using only a suitable roller, apply a second coat of **Nature** in the same way as the first – you will find the first coat of **Nature** will have reduced the porosity of the floor and therefore the second coat will achieve a greater coverage than the first – this is normal. Allow to dry for 2 – 3 hours.

Your floor can sustain light foot traffic after 8 hours and will be completely cured after 5 days. Wet cleaning of the floor and the laying of rugs/matting is only permissible after this time.

MAINTENANCE: **Granwax E-Zee Wood Floor Cleaner** is recommended for floor maintenance but should only be used once full cure has been reached.

COVERAGE: 1st coat approx. 8m² per litre / 2nd coat 10m² per litre. Therefore, 4.5 litres should be sufficient to treat room size of approximately 20m².

DRYING TIMES: 1st coat approximately 1 – 2 hours
2nd coat approximately 2 – 3 hours
Light foot traffic after 8 hours; fully cured after 5 days

PACK SIZE: 4.5 litres (bag in a box design)

STORAGE: In original sealed packaging – 12 months (frost free). Store in cool, dry place.
